Front End Technologies

JavaScript

Duration: 1 Day

JavaScript Basics

1. Write a program which consist of single line and multiline comments.
2. Create an array consisting of fruits names and when we click on a button sort it in descending order.
3. Write a program with FOR/IN loop.
4. Create an object "person" with properties firstname and lastname. Display these properties using 2 different ways of accessing.
5. Write a program with variable hoisting(initialization first then declaration).
6. Use strict mode in your program and understand why variable not declared causes error.

Things to know:

1. How JavaScript differs from Java?
