Front End Technologies   AngularJS   Duration: 1 Day

AngularJS Basics

1. Write a program to evaluate expressions using {{ and }}. Create a text box and change the background of text box when we give a color value.

2. Understand a module and program to include a directive and a controller inside a module from external js file.

3. Write a program to bind the data using ng-model directive. Use ng-init, ng-repeat and ng-include directives inside your program.

4. What is a scope and program with $scope and $rootScope.

Things to know:

1. What are the benefits of AngularJS?
